Current status of servers

After the closing of the giant Megaupload, the news we're seeing are not the best. On the contrary, everything we used to do, you can hang by a thread.

Once the largest and most popular file-hosting site closed, everyone thought that there was an isolated incident - unfortunately it was not. The case was only the first Megaupload, incidente after that, things only got worse. Many other servers have to fear for his fFechamento too, and ended up taking measures to prevent!

And now, several servers are worse every day and headed for the same sad end of the acclaimed and Megaupload.

Service Status:

Closed MegaUpload.

Closing FileServe Premium does not sell.

Deleting files FileJungle. Locked in the U.S..

UploadStation locked in the USA.

What is the fate of the World Downloads?

We are all seeing the world of downloads is fading slowly, one day at a time. What we, and you fear the most visitors, is nearby.

We can not say anything, what we can do is wait and pray, that this does not pass like mere bad memories, and that what we called one day to share, do not try to be a crime.
